

PRESS RELEASE

NEW DATA SHOWS 15.8 PERCENT OF OHIOANS HAVE INCOMES AT OR BELOW THE FEDERAL POVERTY LEVEL, OR NEARLY 1.8 MILLION PEOPLE

Ohio poverty rate higher than national rate, not statistically different from previous year

COLUMBUS, Ohio –Advocacy groups on Thursday called attention to the latest Census data that shows the economic recession hasn't ended for many working Ohioans, whose wages remain stagnant despite the rising cost of living.

Several statewide anti-poverty groups briefed the media on the U.S. Census Bureau's new American Community Survey poverty data, which found that 15.8 percent of Ohioans, or nearly 1.8 million people, live in households with incomes at or below the federal poverty level. For a household of three, the poverty threshold is about \$20,000 a year.

The rate of poverty in Ohio in 2014 was higher than the national rate of 15.5 percent, and was not statistically different from the previous year. It returns the state's poverty rate to 2010 levels, but remains significantly higher than pre-recession rates. Median household income in Ohio was also not statistically different from the previous year.

"The bottom line is: for Ohio to thrive, we have to ensure that all Ohioans can participate fully in our economy and we have to set all of Ohio's children up for life-long success no matter where they come from." said Col Owens, co-chair for Advocates for Ohio's Future.

The poverty rate for children was even higher than the overall population, at 22.9 percent of the 2.59 million Ohioans under age 18.

Additionally, some key demographic groups experienced increases in poverty, including an increase in poverty among African Americans in Ohio from 33.6 percent in 2013 to 34.7 percent in 2014. That's a sharp increase from 2008, when the poverty rate for African Americans in Ohio was 29.3 percent.

"The data continues to show the struggles of Ohio's families with rising costs and stagnant wages," said Phil Cole, executive director of the Ohio Association of Community Action Agencies. "We must ensure the rising tide of our economic recovery lifts the boats of the low-income households, too."

Cathy Johnston, advocacy director for the Coalition on Homelessness and Housing in Ohio, agreed.

"In central Ohio, a family of three or four people would have to earn \$18.80 per hour at a full time job to afford the cost of a basic three-bedroom apartment," said Johnston. "And remember, Ohio's minimum wage is currently \$8.10. If you are eligible for federal housing assistance, you have only a one in four chance of receiving it. In other words, rents are too high and take home pay is too low."

Representatives from participating groups emphasized the need for policies that address poverty issues and include low- and middle-income households in the economic recovery. Kalitha Williams of Policy Matters Ohio called for strengthening state and federal Earned Income Tax Credits.

"The Earned Income Tax Credit and the Child Tax Credit are two of the most powerful tools to fight poverty for low-income workers," said Williams. "New data from the Census shows that these programs reduced the supplemental poverty rate by more than 3 percent, lifting roughly 10 million people, including more than 5 million children, out of poverty in 2014. Congress should make the federal EITC and child tax credit improvements of 2008 and 2009 permanent, and Ohio lawmakers should make our state EITC refundable. These are proven economic policies that help secure Ohio families."

New food insecurity data was also released last week, which showed a stark increase in food insecurity among Ohio households. Lisa Hamler-Fugitt, executive director for the Ohio Association of Foodbanks, said rising food insecurity is a direct reflection of high poverty levels and stagnant household incomes.

"We simply cannot afford policies that leave more than one in six of our residents food insecure, and more than one in three eligible for help from foodbanks," said Hamler-Fugitt. "It is a serious crisis when working people, seniors, and children are being left behind."

COMPARATIVE ECONOMIC CHARACTERISTICS

2014 American Community Survey 1-Year Estimates

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

An * indicates that the estimate is significantly different (at a 90% confidence level) than the estimate from the most current year. A "c" indicates the estimates for that year and the current year are both controlled; a statistical test is not appropriate.

Geographic areas are based on the geographic boundaries of the data year. Current year comparisons with past-year estimates are not re-tabulated to the current year's geographies; rather, the comparison is with the existing geography of each data year. Statistically significant change from prior years' estimates could be the result of changes in the geographic boundaries of an area and not necessarily the demographic, social, or economic characteristics. For more information on geographic changes, see: http://www.census.gov/programs-surveys/acs/guidance.html.
